I have a 2001 Japanese model Corolla 1.3L. I changed my AC compressor 4 months ago. Today I understood that when in idle, it cools less. I opened the front and checked the cold pipe. When I revved, it got colder. When I stopped revving, it got less cold. I'm in Saudi Arabia, but it's not that hot nowadays.

Why is My Car AC Blowing Hot Air? | BlueDevil Products

When you start your car, the AC compressor should be running. If it's not, you may have a problem with the AC compressor or the AC system. The AC compressor is responsible for circulating the refrigerant through the system. If it's not working, the AC won't cool the car. The AC compressor is a mechanical device that is driven by the engine. It has a pulley on the front that is connected to the engine's belt. The AC compressor is located in the front of the car, near the engine. The AC compressor is a critical component of the AC system. If it fails, the AC won't work. The AC compressor is a mechanical device that is driven by the engine. It has a pulley on the front that is connected to the engine's belt. The AC compressor is located in the front of the car, near the engine. The AC compressor is a critical component of the AC system. If it fails, the AC won't work.
