A private function can only be used inside of it's parent function or module. A public function can be used inside or outside of it. Public functions can call private functions inside them, however, since they typically share the same scope.

Public vs. private functions in JavaScript | Go Make Things

The terms Public and Private are used in relation to Modules. The basic concept is that Public variables, subs or functions can be seen and used by all modules in the workbook while Private variables, subs and functions can only be used by code within the same module. Let's look at each of these in turn.

There are a few well known ways of creating objects and using them as private namespaces but in this case this doesn't seem like a good way to do the job. JavaScript uses the idea of function scope to control variable visibility. Roughly speaking any variables declared in a function, anywhere in a function are local to that function.

Private Functions In JavaScript

Set shortly after World War II when rations are still in effect and butchers are living in fear of food inspectors, A Private Function is a comedy about some small town snobs trying to illegally fatten a pig for a celebration of the upcoming Royal wedding.
