Aims And Methods Of Vegetation

Some of the common terms and methods it explores are relevé, count-plot, point-centered quarter, line and point intercept, among others. These methods provide essential foundations to study the vegetation ecology of different plants by utilizing concepts such as density, frequency, dominance, and facilitation.

Aims and Methods of Vegetation Ecology - Dieter Mueller ...

No other text has covered the subject of vegetation sampling design in such depth, breadth, and impartiality as this book, Aims and Methods of Vegetation Ecology. Most of this material remains as current and topical today as it was a quarter of a century ago, because the progress that has been made in vegetation science is in the computer-based treatment of sample data, not in the creation of new sampling protocols.

Aims and Methods of Vegetation Ecology - Yahoo

Considerations of vegetation sampling. Vegetation analysis in the field. Community sampling: the releve method. Measuring species quantities. The count-plot method. Classifying and ordinating vegetation data. Vegetation structure, classification units and systems. Classifying vegetation by tabular comparison.
