Bank Capital And Liquidity Bank

Liquidity is a measure of the cash and other assets banks have available to quickly pay bills and meet short-term business and financial obligations. Capital is a measure of the resources banks have to absorb losses. Liquid assets are cash and assets that can be converted to cash quickly if needed to meet financial obligations.

Bank capital, and a bank's liquidity position, are concepts that are central to understanding what banks do, the risks they take and how best those risks should be mitigated. This article provides a primer on these concepts. It can be misleading to think of capital as 'held' or 'set aside' by banks; capital is not an asset.

Bank capital and liquidity | Bank of England

Bank capital and liquidity perform different functions. Equity capital is provided by shareholders and is the first buffer against losses in a downturn. Equity enables banks to shrink the liabilities side of their balance sheets to match a shrinking asset base caused by losses.
