Elementary differential geometry is centered around problems of curves and surfaces in three dimensional euclidean space. We're using Barret O'Neill's excellent text this semester. O'Neill uses linear algebra and differential forms throughout his text. I am excited about learning the method of moving frames for surfaces in 3-space.

Math 497: Special Topics in Elementary Differential Geometry

Barrett O'Neill's introduction to differential geometry was first published in 1966. At that point, it pretty much had the field to itself. There was simply no other book taking a modern approach to the material that could be used as an undergraduate text. Forty years later, O'Neill has lots of competition, of course.
