Understanding the positive and negative consequences of a behavior for a patient helps design the timing and nature of intervention. For example, in the case above, an intervention would need to follow a noxious antecedent to offset the negative mood it causes.

Treating the negative mood would then decrease the need for escape through

Universal interventions are programmes or support systems provided to a whole population, aiming to improve outcomes in the group overall. In this case, this would be an intervention designed to be delivered to all medical students to address mental ill-health irrespective of risk and/or current levels of distress.
