Jersey, the reference implementation of JAX-RS, implements support for the annotations defined in JSR 311, making it easy for developers to build RESTful web services by using the Java programming language. If you are developing with GlassFish Server, you can install the Jersey samples and documentation by using the Update Tool.

Building RESTful Web Services with JAX-RS - The Java EE 6 ...

There are two possible approaches when creating a web service: Contract-Last and Contract-First. When we use a contract-last approach, we start with the Java code, and we generate the web service contract (WSDL) from the classes. When using contract-first, we start with the WSDL contract, from which we generate the Java classes.
