Cardiovascular Aspects of Dialysis Treatment : the importance of volume control. [Evert J Dorhout Mees] -- Cardiovascular complications are not only responsible for more than half of our patients' mortality, they also represent the bulk of everyday problems in a dialysis unit.

Cardiovascular Aspects of Dialysis Treatment : the ...

In dialysis patients, CVC can increase the incidence of arrhythmias, sudden cardiac death, stroke and mortality. Calcified blood vessels lead to ischaemic CVD and increased pulse pressure and pulse wave velocity (PWV), contributing to the reduction of diastolic coronary perfusion and to LVH, which is a well-known CV risk factor.

Cardiovascular disease in dialysis patients | Nephrology ...

Cardiovascular disease (CVD) is a highly common complication and the first cause of death in patients with end-stage renal disease (ESRD) on haemodialysis (HD). In this population, mortality due to CVD is 20 times higher than in the general population and the majority of maintenance HD patients have ...

Cardiovascular Aspects Of Dialysis Treatment The ...

The aim of this book is to provide a systematic survey of the established pathophysiological principles along which patients on dialysis should be treated. For several reasons, these were insufficiently applied in many centers, leading to excessive and at least partly preventable cardiovascular damage. Since the first edition, more reports have appeared supporting the importance of volume control and the concepts are more widely accepted, be it not so quickly as Scribner hoped for in his ...

Hypertension and Cardiovascular Aspects of Dialysis ...

The increased risks of cardiovascular events and mortality in dialysis patients is partly related to an increased prevalence of traditional cardiovascular risk factors, including diabetes melli -

(PDF) Cardiovascular Disease in Dialysis Patients

In patients undergoing haemodialysis, hypertension has been reported to be associated with left ventricular hypertrophy, left ventricular systolic and diastolic dysfunction, cardiac enlargement, cardiac failure, ischaemic heart disease, myocardial infarction, sudden cardiac death, stroke, and increased cardiovascular and overall mortality.
