Chronic Radiation Syndrome

Chronic radiation syndrome (CRS), or chronic radiation enteritis, is a constellation of health effects of radiation that occur after months or years of chronic exposure to high amounts of radiation. Chronic radiation syndrome develops with a speed and severity proportional to the radiation dose received (i.e., it is a deterministic effect of exposure to ionizing radiation), unlike radiation-induced cancer.

Diagnosis of Chronic Radiation Syndrome. (1) Clinical Department, Urals Research Centre for Radiation Medicine, Chelyabinsk, Russia. Abstract. Diagnosing CRS is often a complicated task, especially when no data on the individual organ doses are available. The greatest difficulties of diagnosing CRS arise in mild cases of the syndrome, when non-specific predominantly functional changes in critical organs (hematopoiesis, immunity, and nervous system) develop.

Acute radiation syndrome (ARS), also known as radiation sickness or radiation poisoning, is a collection of health effects that are caused by being exposed to high amounts of ionizing radiation, in a short period of time. The symptoms of ARS can start within the hour of exposure, and can last for several months. Within the first few days the symptoms are usually nausea, vomiting and a loss of ...

Myalgic encephalomyelitis/chronic fatigue syndrome (ME/CFS) is a serious, long-term illness that affects many body systems. People with ME/CFS are often not able to do their usual activities. At times, ME/CFS may confine them to bed. People with ME/CFS have severe fatigue and sleep problems.

Radiation sickness is damage to your body caused by a large dose of radiation often received over a short period of time (acute). The amount of radiation absorbed by the body — the absorbed dose — determines how sick you'll be. Radiation sickness is also called acute radiation syndrome or radiation poisoning. Radiation sickness is not caused by common imaging tests that use low-dose radiation, such as X-rays or CT scans.

Acute Radiation Syndrome (ARS) is the medical term for the damage occurring to the body after exposure to large amount of radiation within a short period of time (24 hours). The amount of damage and the type of damage to the body depends on the dose and amount of radiation absorbed by the body. Acute radiation syndrome is a rare, but serious ...
