Cancerous cells differ from normal cells in terms of cell growth, morphology, cell-cell interaction, organization of the cytoskeleton, and interactions with the extracellular matrix^{11 - 13}. The atomic force microscope (AFM) can be used to detect most of these changes^{9, 14} but one of the main challenges in understanding these differences is the lack of statistically sound quantitative data.

AFM Detects Differences in the Surface Brush of Normal and ...

This study compared the amount and pattern of fluoride release from a new glass-ionomer-based material (nano-ionomer) with other restorative materials and correlated the surface a
