The chloride content of a soluble salt, or of an aqueous solution, can be determined by precipitation of the chloride ion as silver chloride:  $\text{Ag}^+(\text{aq}) + \text{Cl}^-(\text{aq}) \rightarrow \text{AgCl}(\text{s})$  The silver chloride precipitate initially forms as a colloid, which is coagulated with heat.

**Chloride**  
Gravimetric analysis relies on a critical mass measurement. As an example, solutions containing chloride ions can be assayed by adding an excess of silver nitrate. The reaction product, a silver chloride precipitate, is filtered from the solution, dried, and weighed. Because the product was formed...

## **Salt - 1469 Words ...**

An example of a gravimetric analysis is the determination of chloride in a compound. In order to do a gravimetric analysis, a cation must be found that forms an insoluble compound with chloride. This compound must also be pure and easily filtered. The solubility rules indicate that  $\text{Ag}^+$ ,  $\text{Pb}^{2+}$ , and  $\text{Hg}^{2+}$
