Solution to Problem 1.19. Let  $A$  be the event that Alice does not find her paper in drawer  $i$ . Since the paper is in drawer  $i$  with probability  $p_i$ , and her search is successful with probability  $d_i$ , the

multiplication rule yields  $P(A_j) = p_j \prod_{i=1}^{j-1} p_i$ , so that  $P(A) = \sum_{j=1}^{\infty} p_j \prod_{i=1}^{j-1} p_i$ . Let  $B_j$  be the event that the paper is in drawer  $j$ .

Solutions to Homework Assignment 9 Problem 1. (From Hoel, Port, and Stone) Consider an irreducible birth and death chain on the nonnegative integers with  $q_i = p_{i+1} = (i+1)^2$ : Show that the chain is transient. Solution: For irreducible birth and death chain, the states are transient if and only if  $\sum_{m=1}^{\infty} \prod_{i=1}^m \frac{p_i}{q_i} < \infty$ : Since  $\prod_{i=1}^m \frac{p_i}{q_i} = \prod_{i=1}^m \frac{1}{i+1} = \frac{1}{m+1}$  ...
