Fluid Mechanics and Hydraulic Machines

Hydraulic machines are machinery and tools that use liquid fluid power to do simple work, operated by the use of hydraulics, where a liquid is the powering medium. In heavy equipment and other types of machine, hydraulic fluid is transmitted throughout the machine to various hydraulic motors and hydraulic cylinders and becomes pressurised according to the resistance present.

Hydraulic machines use liquid fluid power to perform work. Heavy construction vehicles are a common example. In this type of machine, hydraulic fluid is pumped to various hydraulic motors and hydraulic cylinders throughout the machine and becomes pressurized according to the resistance present. The fluid is controlled directly or automatically by control valves and distributed through hoses, tubes, and/or pipes. Hydraulic systems, like pneumatic systems, are based on Pascal's law which states th

Hydraulic machinery - Wikipedia

A stream of fluid entering in a machine such as a hydraulic or steam turbine, a pump or fan has more or less a defined direction. A force is always required to act upon the fluid to change its velocity either in direction or in magnitude. Newton's Third law of motion states that to every action there is an equal and opposite reaction.
