Introduction To

Real Analysis

$g(a))(f(b) - f(a))$. Because of the assumption on f and g , h

is continuous on $[a, b]$ and differentiable

on (a, b) with $h(a) = h(b) = 0$. Theorem 7.11 implies there is a $c \in (a, b)$

such that $h'(c) = 0$. Then $0 = h'(c) = (g(b) - g(a))f'(c) + g'(c)(f(b) - f(a))$
 $\Rightarrow g'(c)(f(b) - f(a)) = f'(c)(g(b) - g(a))$.

**INTRODUCTION TO
REAL ANALYSIS -
Trinity University**

This free online textbook (OER more formally) is a course in undergraduate real analysis (somewhere it is called "advanced calculus"). The book is meant both for a basic course for students who do not necessarily wish to go to graduate school, but also as a more advanced course that also covers topics

Introduction To

Real Analysis

general idea of what we do in analysis.

Suppose next we really wish to prove the equality $x = 0$. In analysis, we prove two inequalities: $x \leq 0$ and $x \geq 0$. To prove the inequality $x \leq 0$, we prove $x < -\epsilon$ for all positive ϵ . To prove the inequality $x \geq 0$, we prove $x > \epsilon$ for all positive ϵ . The term real analysis is a little bit of a misnomer.

Introduction To
Real Analysis
Basic Analysis I

This is real analysis; it's going to be hard to understand. I say this as a Ph.D. with a ton of background in real analysis; the book is well-written. Any book that makes the subject look easy to master is probably not really touching on the main ideas of real analysis. This book is basically the midpoint between a super easy book and baby Rudin.
