Manual Solution Linear Partial Differential
Thus the solution of the partial differential equation is u(x,y)=f(y+ cosx). To verify the solution, we use the chain rule and get ux = −sinxf0 (y+ cosx) and uy = f0 (y+cosx). Thus ux + sinxuy = 0, as desired.

The linear polynomial equation, which consists of derivatives of several variables is known as a linear differential equation. The solution of a differential equation is the term that satisfies it. It can also be the case where there are no solutions or maybe infinite solutions to the differential equations.
