An arc measure is an angle the arc makes at the center of a circle, whereas the arc length is the span along the arc. This angle measure can be in radians or degrees, and we can easily convert between each with the formula $\pi \text{ radians} = 180^\circ$ $\pi \text{ r a d i a n s} = 180^\circ$. You can also measure the circumference, or distance around, a circle.
