Socio-ecological models were developed to further the understanding of the dynamic interrelations among various personal and environmental factors. Socioecological models were introduced to urban studies by sociologists associated with the Chicago School after the First World War as a reaction to the narrow scope of most research conducted by developmental psychologists.

Sustainable Materials Management (SMM) digs deep into the nature and use of materials to provide a much richer, deeper measure of environmental sustainability. SMM looks across all the various life-cycle aspects of materials, packaging, and products, from extraction to disposal.

### **How Do We Measure Sustainability? - Plastics Make It Possible**

Likewise, the model is based on the idea that the systems related to the environment of individuals play a dimensional role. That is, each of the specified systems contains within it another. The four systems that make up the ecological model are: microsystem, mesosystem, exosystem and macrosystem.
