Membrane technology encompasses the related scientific and engineering approaches for the transport or rejection of components, species, or substances through or by the membranes. Membrane technology is used to explain the mechanical separation processes for separating gas or liquid streams (Baker 2004; Nunes & Peinemann 2001).

Membrane Technology - an overview | ScienceDirect Topics

Membrane technology covers all engineering approaches for the transport of substances between two fractions with the help of permeable membranes. In general, mechanical separation processes for separating gaseous or liquid streams use membrane technology.

Membrane technology - Wikipedia

The Membrane Science, Engineering and Technology (MAST) Center focuses on new membrane materials and processes and their industrial applications. Membranes are made of polymers, inorganic materials, or hybrids of the two. They are used for the separation and purification of chemical compounds, biological molecules, and other process streams.
