Non-Euclidean geometry is the study of geometry on surfaces which are not flat. Because the surface is curved, there are no straight lines in the traditional sense, but these distance minimizing curves known as geodesics will play the role of straight lines in these new geometries.

As we saw, non-Euclidean geometries were introduced to serve the need for more faithful representations, and indeed, the first phase of papers focused on this goal. A clear downstream use awaited the development of non-Euclidean models that achieve state-of-the-art performance, which have just
