Peritoneal Carcinomatosis: Principles of Management ...

Peritoneal carcinomatosis was thought for a long time to be a terminal disease with limited surgical options and only amenable to palliative treatment. Earlier studies showed that the median survival of patients with peritoneal carcinomatosis was from 5.2 to 7 months [3, 6, 8]. Due to these dismal results, new therapeutic modalities emerged, including cytoreductive surgery (CRS) with hyperthermic intraperitoneal chemotherapy (HIPEC).
