Factors Influencing Growth Pattern of Population in India are 1. Birthrate, 2. Death Rate, 3.

## **Factors Influencing Growth Pattern of Population in India**

Three patterns of distribution in populations of organisms: A population may have a uniform, random, or clumped distribution. Territorial birds, such as penguins, tend to have uniform distribution. Plants with wind-dispersed seeds, such as dandelions, are usually distributed randomly.

## **Population Demography | Boundless Biology**

One of the most basic factors affecting settlement patterns is the physical geography of the land. Climate is key, because if a place is too dry, too cold or too hot, it's more difficult for large numbers of people to settle there, especially if they make their living from farming.

## **Factors That Influence Settlement Patterns | Synonym**

Three basic types of population distribution within a regional range are (from top to bottom) uniform, random, and clumped. On large scales, the pattern of distribution among individuals in a population is clumped. On small scales, the pattern may be clumped, regular, or random.

## **Species distribution - Wikipedia**

Human Factors that Influence Population Distribution Population distribution on the Earth's surface is not determined by physical elements alone, for within the broad framework of physical forces, human factors also influence the way population is distributed over our planet. These factors are economic, cultural, historical, and political.
