If the birth rate during one year is 52 per 1000 and the death rate is 12 per 1000, then the annual growth of this population is $52 - 12 = 40$ per 1000. The natural growth rate for this population is $40/1000 \times 100 = 4\%$. It is called natural growth rate because it is based on birth rate and death rate only, not on immigration or emigration.

The basic principles of biology are usually not actually that complicated, at least when you compare them to particle physics or compiler design or stuff like that. But biology is still hugely, hugely complex, because you simply have so many interacting parts - and yes, you only really understand it when you know about an appreciable fraction ...

I should have loved biology | Hacker News

Biology is a broad subject, which allows biology graduates to find employment in a variety of industries such as biotechnology, publishing, education and consultancy. In addition to subject-specific skills, biology graduates develop valuable transferable skills such as data analysis, communication, teamwork and time management.
