To solve the low accuracy and poor reliability of the alignment of low-end micro-electro-mechanical systems (MEMS) inertial measurement units (IMU) in low dynamic applications such as precision agriculture, this paper proposes a velocity-based optimization-based alignment (VBOBA) method using the assistance of GNSS velocity.

Second Edition, Aron Hosen
Remote Sensing Library

This article focuses on the development of system and technology with constant monitoring, to secure supply of goods and materials for humanitarian aid, including natural disasters or military missions, using a global navigation satellite system (GNSS). The aim is to prevent occurrence of a gap between the immediate aid and the recovery
