A manual defrost freezer does not contain any automatic heating elements to prevent the build-up of frost or ice. It requires the owner to manually defrost the freezer coils as frost builds up. When the coils are covered by too much frost and ice, airflow is restricted and the freezer won't efficiently cool food.

Self-Defrosting vs Manual Defrosting Freezer: What's the ...

The defrost timer motor runs and moves the control components in the device. When the control contacts in the defrost timer advance into the defrost cycle, the compressor stops and the defrost heater turns on for a specified period of time to melt frost off of the evaporator fins. This promotes more efficient exchange of heat across the evaporator.

The defrost timer controls the intervals between defrost cycles and limits the length of the cycle. During the defrost session, the timer activates the defrost heating element and prevents the compressor from running, so frost melts from the evaporator fins. Replace the defrost timer if it doesn't control the defrost heater and compressor properly.
