The muscular system is responsible for the movement of the human body. Attached to the bones of the skeletal system are about 700 named muscles that make up roughly half of a person's body weight. Each of these muscles is a discrete organ constructed of skeletal muscle tissue, blood vessels, tendons, and nerves.

Muscular System - Muscles of the Human Body
Anatomy (Greek anatomḗ, 'dissection') is the branch of biology concerned with the study of the structure of organisms and their parts. Anatomy is a branch of natural science which deals with the structural organization of living things. It is an old science, having its beginnings in prehistoric times. Anatomy is inherently tied to developmental biology, embryology, comparative anatomy ...

Muscle is a soft tissue found in most animals. Muscle cells contain protein filaments of actin and myosin that slide past one another, producing a contraction that changes both the length and the shape of the cell. Muscles function to produce force and motion.They are primarily responsible for maintaining and changing posture, locomotion, as well as movement of internal organs, such as the ...

Skeletal muscle development can be traced to the appearance of somites.By day 20 the trilaminar disc has formed and the mesoderm has differentiated into different areas. The area directly adjacent to the neural tube is known as the paraxial mesoderm.. From day 20 onwards the paraxial mesoderm begins to differentiate further into segments known as somites. 44 pairs of somites are formed ...
